

BSV WhatsApp Compliance Communication Platform

Two-way WhatsApp channel between the BSV Compliance team and its field force

Source	Technical discussion on BSV WhatsApp Project, Teams call, 1 Oct 2026 (30 min)
BSV (client)	Pranita Mantha (Compliance, requirement owner)
Our team	Kinjal Nathwani Raicha, Harshal Nathe, Nikhil Kulkarni, Prasanna Sulakhe, Rohini Godhe
Next milestone	Present workflow, blueprint, Phase 1 scope, estimate and timelines to BSV next week (week of 5 Oct 2026)

What BSV wants, in one paragraph

BSV's Compliance team wants to reach about **1,000 field-force employees on WhatsApp**, because a separate app like DocuBucket got little use. Compliance pushes short, personal messages to each employee: quizzes, video scenarios, learning nuggets and training announcements. Employees answer with a tap (Yes/No, Correct/Wrong, Understood). Employees can also **ask policy questions** and get an automatic answer. If the bot can't answer, it tells them to contact their local compliance team or manager. **No live human chat**. Every response is **recorded and reported** so Compliance can improve its training. Users never sign up. The admin uploads the employee list from HR and removes people who leave. The system should run on **BSV's own environment** because phone numbers are personal data.

1. Background: why this project exists

- **DocuBucket had low usage.** It was a separate web or mobile app, outside employees' day-to-day routine. People used it only when someone reminded them to. (2:58–3:54)
- **Communication was one-way from the user's side.** Employees had to start every interaction. Compliance couldn't reach out proactively. (2:58)
- **Manual access management was a hassle.** Admins had to create and delete DocuBucket access one person at a time. (14:05)
- **Goal: traction.** WhatsApp is already on everyone's phone, so participation should go up. BSV wants to see a prototype and some traction **in October 2026**. (6:33, 24:24)

2. Users and roles

Role	Where they work	What they do
Admin (Compliance team / Center of Excellence)	Web admin portal	Uploads and maintains the employee list, creates and sends message campaigns, views responses, queries and reports. The client said "super admin"; the number of admin levels is not defined yet (see Open Questions).
Field-force employee	Their own WhatsApp	Receives personal messages, taps reply buttons, watches videos, asks policy questions. No login, no app, no sign-up.
HR team (indirect)	Outside the system	Provides the employee master list with phone numbers. It is the source of truth for who should receive messages.

3. Functional requirements

Timestamps refer to the meeting transcript. **Phase 1** = confirmed in the meeting. **Later** = BSV explicitly deferred it. **Confirm** = implied but not confirmed.

3.1 WhatsApp channel

ID	Requirement	Priority	Source
FR-01	The system must be integrated with WhatsApp itself, not just a link from WhatsApp to another app.	Phase 1	4:01–4:11
FR-02	Two-way communication. Admins push messages to employees, and employees can send questions to the bot.	Phase 1	4:11, 6:17
FR-03	One-to-one delivery only. Each employee receives a personal, individually addressed message, like an HDFC bank alert. Not a WhatsApp group: "a group would dilute the purpose".	Phase 1	9:09–9:30
FR-04	Messages can include quick-reply option buttons (HDFC example: "statement ready, choose one of 3 options").	Phase 1	4:53

3.2 Outbound messages (Compliance → employee)

ID	Requirement	Priority	Source
FR-05	True/False knowledge check. Example: "Confidential information can be shared in a public setting: True / False".	Phase 1	5:12–5:35
FR-06	Video scenario question. A short clip of an interaction with a doctor or external vendor. The employee answers whether the person in it acted correctly or wrongly.	Phase 1	5:35
FR-07	Learning nugget with acknowledgement. Compliance sends a short piece of learning content, and each employee confirms with "Understood".	Phase 1	5:35
FR-08	Announcement with status reply. Example: "New training module is live, please take it". The employee answers "Yes, taken / Not yet".	Phase 1	11:10
FR-09	Content changes every time. Admins create new messages, questions and videos per campaign, often around a monthly theme. Nothing is fixed or hard-coded.	Phase 1	10:38
FR-10	Messages go out periodically over time. A scheduling ability is implied.	Confirm	6:17–6:33
FR-11	Audience in Phase 1 = all employees in the list. Sending by team or business unit is deferred until BSV sees that the channel gets traction.	Phase 1 / Later	12:17–12:36

3.3 Inbound queries (employee → bot)

ID	Requirement	Priority	Source
FR-12	Employees can freely ask questions about BSV policies at any time, and the bot responds.	Phase 1	4:11, 5:35

FR-13	No human in the loop. No admin replies to chats manually. If the bot can't help, it replies: "Please connect with your local compliance team or your manager."	Phase 1	10:10
FR-14	How the bot answers is not decided: fixed FAQ menu, or AI over policy documents. Harshal asked about AI and it was not answered.	Confirm	2:08

3.4 Employee list (no onboarding)

ID	Requirement	Priority	Source
FR-15	Only a predefined set of employees (field force, about 1,000) can receive messages. Messages can't be sent to arbitrary numbers.	Phase 1	11:51
FR-16	No user sign-up or onboarding. Being in the HR employee master list is the only criterion.	Phase 1	14:05
FR-17	Admin uploads the employee list (from HR, e.g. Excel or CSV) into the portal.	Phase 1	18:47–19:12
FR-18	Admin can delete or deactivate employees , for example people who have resigned.	Phase 1	19:20–19:23
FR-19	No validation against Microsoft Entra ID or other systems. The client found it too technical. Keep the process simple.	Not needed	18:37–19:35

3.5 Responses and reporting

ID	Requirement	Priority	Source
FR-20	Capture every response: who answered, what they chose, and when. Also who did not respond.	Phase 1	7:15
FR-21	Reports at least equal to what DocuBucket gives today on reactions and responses, so Compliance can see how employees react and refine training.	Phase 1	7:15–7:51
FR-22	Log employee questions, including unanswered ones, so Compliance can see what people are confused about.	Confirm	7:15 (implied)
FR-23	AI analysis of feedback (sentiment, themes, weak-topic detection). Asked by Harshal, not answered by BSV.	Confirm	2:08

4. Non-functional requirements

ID	Requirement	Priority	Source
NFR-01	Hosted on BSV's environment , not ours. Employee phone numbers are personal information. Pranita will confirm with Harsha.	Confirm	22:02–22:28
NFR-02	Simple to operate. Minimal admin effort and zero effort for employees.	Phase 1	15:18, 19:35
NFR-03	Phased delivery is accepted , but Phase 1 must still deliver the core purpose: two-way communication and response capture. A Phase 1 that is too thin will be rejected.	Phase 1	22:39–23:34
NFR-04	Scale: about 1,000 recipients per broadcast in Phase 1.	Phase 1	11:51
NFR-05	Privacy and security of personal data: phone numbers and responses (for example under India's DPDP Act). Role-based admin login, audit logs.	Confirm	22:28 (implied)

5. How the system fits together

There are three parts: an **Admin Portal** (web app for Compliance), a **Backend** with a database (hosted at BSV), and the **WhatsApp Business Platform** (Meta's official API) that delivers messages to employees' normal WhatsApp.

Figure 1. System context. Everything inside the dashed box runs on BSV's infrastructure.

Admin Portal: screens (proposed)

- **Login:** admin users only
- **Employees:** upload HR list, search, deactivate or delete
- **Campaigns:** create (type, text, video, options, correct answer), preview, send now or schedule
- **Campaign results:** delivered, read, responded, correct %, non-responders
- **Employee queries:** questions asked, answered or not
- **Knowledge base / FAQ:** policy Q&A used by the bot
- **Reports:** export to Excel

Core data (proposed)

- **Employee:** emp ID, name, phone, region/BU (stored for Phase 2), status
- **Campaign:** type, content, media, options, correct option, schedule, status
- **Delivery:** campaign × employee, sent / delivered / read / failed
- **Response:** campaign × employee, chosen option, is correct, time
- **Query:** employee, question text, bot answer, answered yes/no, time
- **Audit log:** admin actions

6. Flow A: admin sends a campaign

This is the main loop BSV described. Compliance creates content, every employee gets it personally, they tap a reply, and Compliance sees the results.

7. Flow B: employee asks a question

An employee can message the BSV number at any time. The bot first checks that the number belongs to a listed employee. Then it either records a button reply or tries to answer the question. If it can't answer, it points the employee to their local compliance team or manager. No human chats live (FR-13).

Figure 3. Decision flow for any incoming message.

8. Flow C: employee list lifecycle

No sign-up, no app install, no Entra ID check. Re-uploading the HR list updates it (add new, flag missing).

Figure 4. Who is allowed to receive messages.

9. What employees will see (mockups)

FR-05 · True/False check

BSV Compliance

Hi Ravi, this month's theme is **Privacy**. Confidential information can be shared in a public setting.

True

False

False

Correct! Never discuss confidential information in public places.

FR-06 · Video scenario

BSV Compliance

▶ 45-sec clip: visit with a doctor

Did the representative act correctly in this video?

Correct action

Wrong action

Correct action

Not quite. Offering a gift to a doctor is not allowed under policy.

FR-07 · Learning nugget

BSV Compliance

💡 **Nugget of the week**

Before meeting an external vendor, always check that they are approved in the vendor list.

Understood

I have a question

Understood

FR-08 / FR-12 · Announcement + question

BSV Compliance

📢 The new **Anti-Bribery** training module is live. Have you completed it?

Yes, completed

Not yet

What is the deadline?

I don't have that information. Please connect with your local compliance team or your manager.

Names, policies and wording are illustrative only.

10. WhatsApp platform constraints that affect the design

These points were not discussed in the meeting. They are standard WhatsApp Business Platform rules that we need to plan for and raise with BSV. Check the details against Meta's current documentation when estimating.

Constraint	What it means for this project
Official WhatsApp Business API required	Bulk 1:1 sending to 1,000 people can't be done with normal WhatsApp or WhatsApp Business app; the number would get banned. BSV needs a Meta Business account (verified), a dedicated phone number, and either Meta Cloud API directly or a BSP (e.g. Gupshup, Twilio, Interakt).
Pre-approved templates	Messages that the business starts must use templates Meta has approved. Every new campaign = new template submission, which usually takes minutes to a day. The portal should handle template creation and approval status. This affects FR-09 ("content varies every time").
24-hour window	Once an employee replies, the bot can send free-form replies (feedback, query answers) for 24 hours without a template.
Opt-in consent	WhatsApp policy requires recipients to have opted in. This sits awkwardly with "no onboarding" (FR-16). A light option: BSV collects consent through HR or the employment process, or the first message asks for consent with one tap. Needs a BSV decision.
Per-message cost	Meta charges per template message, at rates that depend on category and country. 1,000 employees × N campaigns per month is a recurring running cost that BSV pays. Include it in the proposal.
Buttons and media limits	Quick-reply buttons have a short label limit (about 20 characters) and a limited count per message, so keep 2–3 options. Videos have a size limit (about 16 MB), so keep clips short and compressed.
Self-hosting (NFR-01)	The portal, backend and DB can run on BSV's servers or cloud. Messages still pass through Meta's servers. That's unavoidable with WhatsApp, and BSV should understand it.

11. Proposed phasing (our suggestion, for discussion)

BSV accepts a phased approach, but Phase 1 must "serve the purpose" (NFR-03). This is a starting point for our internal brainstorming. It has not been agreed with BSV.

Phase 1: MVP (target: prototype in October)

- WhatsApp Business API setup (number, verification, templates)
- Admin login (single admin role)
- Employee list upload, edit, deactivate
- 4 campaign types: True/False, Video, Nugget, Announcement
- Send to all active employees, now or scheduled
- Capture button replies with instant feedback
- Rule-based FAQ bot for policy questions with the fallback message
- Campaign report and query log, Excel export
- Deploy on BSV environment

Phase 2+: enhancements

- Send by team, region or business unit (FR-11 Later)
- Multiple admin roles (super admin, content creator, viewer)
- AI answers from policy documents (RAG) instead of fixed FAQ
- AI insights on responses and questions: weak topics, trends (FR-23)
- Automatic reminders to non-responders
- Multi-language messages
- Dashboard charts, leaderboards, gamification
- HRMS integration for automatic list sync

12. Open questions to clarify with BSV

#	Question	Why it matters
1	How should the bot answer policy questions: a fixed FAQ list or menu, or AI reading BSV's policy documents? Who provides the policy content?	Biggest effort and cost driver (FR-14)
2	Is AI analysis of responses wanted in Phase 1? Harshal asked; it was not answered.	Scope (FR-23)
3	How many admin users and roles? Only "super admin", or also content creators and viewers?	Login and permissions design
4	Hosting confirmed on BSV's environment? What exactly: on-premises servers, Azure, or AWS? Who runs it after go-live? (Pending Harsha's opinion.)	Architecture, deployment, support (NFR-01)
5	Does BSV already have a Meta Business account or WhatsApp Business API number? Who pays per-message charges?	Setup time and running cost
6	How will employee consent (opt-in) for WhatsApp messages be handled?	WhatsApp policy compliance
7	What fields are in the HR employee list (ID, name, phone, region, BU, manager, language)?	Upload format and future segmentation
8	Which exact reports does DocuBucket give today? Can BSV share a sample?	Defines "same as DocuBucket" (FR-21)
9	How often will campaigns go out (weekly or monthly)? Are reminders to non-responders wanted?	Scheduler and cost estimate
10	Languages: English only, or regional languages too?	Template and content effort
11	What did "option one or two" in Pranita's earlier email to Kinjal refer to? (28:06)	May change the direction

13. Action items and timeline

Action	Owner	When
Forward Pranita's earlier email ("option 1 / 2") to the team	Kinjal	Immediately
Internal brainstorm; decide Phase 1 scope ("minimalistic but powerful")	Harshal + team	This week
Prepare simple workflow document and solution blueprint	Harshal + team	Before next call
Prepare estimate and timelines . BSV calls this the "key critical factor" for approval.	Harshal + team	Before next call
Present blueprint, Phase 1 scope and estimate to BSV	Harshal / Kinjal	Middle to end of next week (week of 5 Oct)
Confirm hosting decision (BSV vs. vendor environment)	Pranita (with Harsha)	Open
Clarifications as needed, over a recorded Teams call	Team ↔ Pranita	Ongoing

Key takeaway for the team

BSV is buying **engagement**, not features. Phase 1 succeeds if employees actually reply on WhatsApp and Compliance can see who replied and what they understood. Keep the employee side to **one tap**, the admin side **simple**, and plan early for the WhatsApp-specific items (Business API, template approval, opt-in, per-message cost). They affect both the timeline and the estimate BSV is waiting for.
